DEPENDENCY

● Native I/O

```
# RH
$ yum install libaio

# Ubuntu
$ apt-get install libaio1
```

● Can disable with `innodb_use_native_aio`

<http://blogs.innodb.com/wp/2010/05/innodb-recovery-gets-even-faster-in-plugin-I-I-thanks-to-native-aio/>

Issues

ISSUES

- Lack of distro support
 - No RH/CentOS/OEL Repository
 - Why not <http://public-yum.oracle.com>
 - No Ubuntu 5.5.x release

Why?

WHY UPGRADE?

- It is the current version
- Next version in development
- Better for new H/W
- Good habit

UPGRADE ISSUES

- Distro dependencies
- native I/O library
- Reserved Word (client example)
- innodb_file_per_table (optional)

UPGRADE PATH

- Lazy way
 - Stop
 - Backup Data/Binaries
 - Upgrade Binaries
 - Start
 - mysql_upgrade

Has risks but can be
this simple

UPGRADE PATH

- Upgrade Slave first
 - Test
 - Verify
- Multiple Instance servers
 - Be wary of PATH

Conclusion

CONCLUSION
